

**Amendments to the Claims:**

Please amend the claims as shown below. This Listing of Claims will replace prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Previously Presented) A printing apparatus that processes a print job, the printing apparatus comprising:

a receiving unit configured to receive, from an information processing system, the print job and a notification destination of information indicating completion of cancellation of the print job;

a request receiving unit configured to receive, from the information processing system, a request for canceling the print job received by the receiving unit;

a determining unit configured to determine whether the print job specified in the request still exists in the printing apparatus, in a case where the request is received by the request receiving unit;

a responding unit configured to transmit response information indicating that the request has been received to the information processing system before cancellation of the print job specified in the request is completed in a case where the determining unit determines that the print job specified in the request still exists in the printing apparatus, and to transmit error information to the information processing system in a case where the determining unit determines

that the print job specified in the request does not exist in the printing apparatus, as a response to the request received by the request receiving unit; and

a transmitting unit configured to transmit the information indicating that the received print job has been canceled to the notification destination received by the receiving unit, after the print job has been canceled in accordance with the request received by the request receiving unit,

wherein the notification destination received by the receiving unit is different from the information processing system to which the responding unit transmits the response information or the error information.

2. (Previously Presented) A printing apparatus according to Claim 1, further comprising:

a retrieving unit configured to retrieve the print job corresponding to a job identifier specified in the request that has been submitted in accordance with the request received by the request receiving unit,

wherein the responding unit transmits either the response information to the information processing system if the corresponding print job is retrieved by the retrieving unit or the error information to the information processing system if the corresponding print job is not retrieved by the retrieving unit.

3. (Previously Presented) A printing apparatus according to Claim 1, further comprising:

an acquiring unit configured to acquire second identification information of the print job corresponding to first identification information specified in the request received by the request receiving unit, the second identification information being associated with the print job in order for the printing apparatus to manage the print job; and

a canceling unit configured to cancel the print job based on the second identification information acquired by the acquiring unit.

4. (Previously Presented) A printing apparatus according to Claim 3, further comprising:

a print data request receiving unit configured to receive a request for the print job from the information processing system;

an identification-information transmitting unit configured to transmit the first identification information corresponding to the print job to the information processing system in accordance with the request received by the print data request receiving unit; and

a print-data receiving unit configured to receive print data corresponding to the print job from the information processing system after the first identification information has been transmitted by the identification-information transmitting unit.

5. (Original) A printing apparatus according to Claim 3, wherein the transmitting unit transmits the information that the print job has been canceled to

the information processing system after the print job has been canceled by the canceling unit.

6. (Previously Presented) A method of canceling a print job in a printing apparatus, the method comprising:

receiving, from an information processing system, the print job and a notification destination of information indicating completion of cancellation of the print job;

receiving, from the information processing system, a request for canceling the print job received by the printing apparatus;

determining whether the print job specified in the received request still exists in the printing apparatus, in a case where the request is received;

transmitting response information indicating that the request has been received to the information processing system as a response to the request before cancellation of the print job specified in the request is completed in a case where it is determined that the print job specified in the request still exists in the printing apparatus;

transmitting error information to the information processing system as a response to the request for canceling the print job in a case where it is determined that the print job specified in the request does not exist in the printing apparatus; and

transmitting the information indicating that the received print job has been canceled to the received notification destination, after the print job has been canceled in accordance with the received request,

wherein the notification destination is different from the information processing system to which the response information or the error information is transmitted.

7. (Canceled)

8. (Previously Presented) A method according to Claim 6, further comprising:

retrieving the print job corresponding to a job identifier specified in the request that has been submitted in accordance with the request,

wherein the response information is transmitted to the information processing system if the corresponding print job is retrieved and the error information is transmitted to the information processing system if the corresponding print job is not retrieved.

9. (Previously Presented) A method according to Claim 6, further comprising:

acquiring second identification information of the print job corresponding to first identification information specified in the request, the second identification

information being associated with the print job in order for the printing apparatus to manage the print job; and

canceling the print job based on the acquired second identification information.

10. (Canceled)

11. (Previously Presented) A printing apparatus that processes a print job, the printing apparatus comprising:

a receiving unit configured to receive, from an information processing system, the print job and a notification destination of information indicating completion of cancellation of the print job;

a request receiving unit configured to receive, from the information processing system, a request for canceling the print job received by the receiving unit;

a responding unit configured to transmit response information indicating that the request has been received to the information processing system before cancellation of the print job specified in the request is completed; and

a transmitting unit configured to transmit the information indicating that the received print job has been canceled to the notification destination received by the receiving unit, after the print job has been canceled in accordance with the request received by the request receiving unit,

wherein the notification destination received by the receiving unit is different from the information processing system to which the responding unit transmits the response information.
